SUMMARY

I am a dedicated Software Engineer with proven experience in developing and maintaining robust software solutions. With a strong foundation in Frontend technologies and Backend services, I excel in delivering high-quality applications tailored to client needs. I thrive in collaborative environments, aiming for continuous improvement and successful project outcomes. My passion lies in creating efficient, scalable software that enhances user experiences

EXPERIENCE

Software Engineer

Extramarks

📅 07/2024 - Present 📍 Noida

An organization focused on providing educational solutions through digital learning

- Developed and maintained secure APIs to support scalable application features
- Created complex and dynamic user interfaces with a focus on performance and responsiveness
- Utilized Python for efficient data manipulation and processing

Software Engineer

Bonami Software

📅 06/2022 - 06/2024 📍 Delhi

A service-based company that develops software solutions for clients

- Developed and maintained software applications for clients in a service-based company, ensuring scalability, reliability, and performance met client requirements
- Collaborated with stakeholders to gather requirements, define project scope, and prioritize tasks for timely delivery of solutions
- Worked closely with cross-functional teams, including product management and quality assurance, to integrate software solutions and drive successful project outcomes tailored to client needs
- Contributed to the continuous improvement of development processes and tools, enhancing team productivity and efficiency within the service-based company setting

EDUCATION

High School

Aaryan International School

📅 01/2017 - 12/2017

Bachelor of Computer Application (BCA)

Chaudhary Charan Singh University

📅 01/2017 - 12/2020

Masters of Computer Application (MCA)

Indira Gandhi National Open University

📅 01/2021 - 12/2024

SKILLS

JavaScript AWS AWS Lambda

AWS Services Cognito Docker

EC2 Git GitHub Tokio Jest

E2E testing MongoDB Python

React Rust TypeScript

Node.js Angular

PROJECTS

Crypto Website

A full stack cryptocurrency website project

- Worked on a cryptocurrency website, overseeing both frontend and backend aspects
- Utilized Next.js and React.js to create responsive templates and custom forms for seamless user interaction
- Implemented backend services using Rust Tokio runtime with Unit Testing, ensuring secure transactions and efficient data management

ElectricKiwi

A full stack project focused on energy solutions

- Contributed to frontend development for an energy-based project, focusing on creating custom components and integrating them across JavaScript libraries and frameworks
- Created backend API to serve data, and integration of AWS services like Lambda and Cognito for Authorization/Authentication

T-Mobile(Adobe)

Frontend project associated with Adobe AEM

- Developed modular and responsive Alpine.js components optimized for performance and compatibility with AEM
- Collaborated with AEM developers to seamlessly integrate frontend components into the AEM environment while adhering to best practices and client specifications
